

Step One Download Tickets

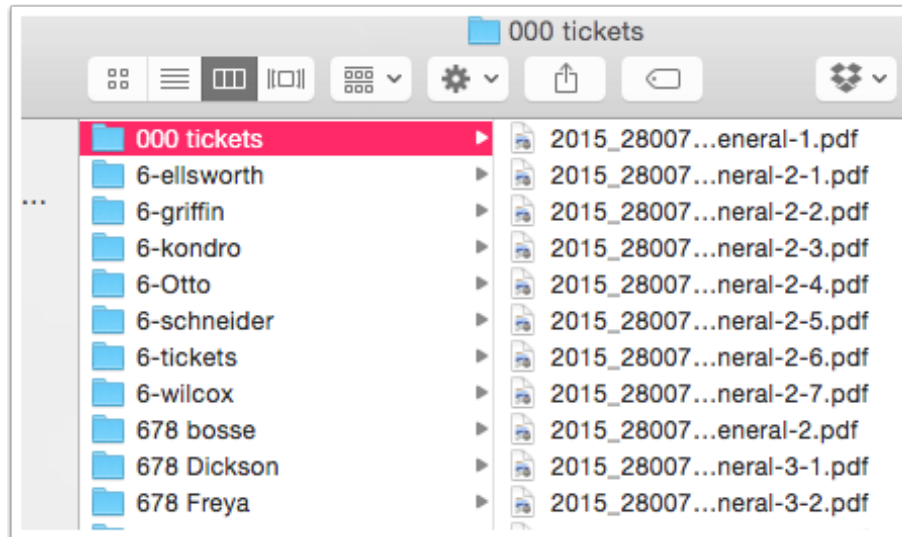

[illegible]

How to Print AMP Tickets Correctly

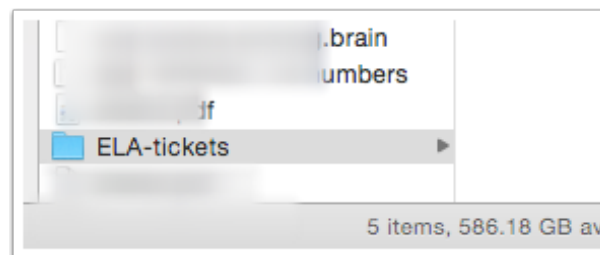

000 tickets

I created a folder called "000 tickets". After I download all the tickets for a class, I put them in this folder. If you download them in alphabetical order, they will be in the correct order for the next step.

ELA-tickets - Create a folder on your desktop called "ELA-tickets"

This will be used in the next step.

Run "Amp Ticket Printing.app"

Before running this step, you need to ensure the following are in place:

How to Print AMP Tickets Correctly

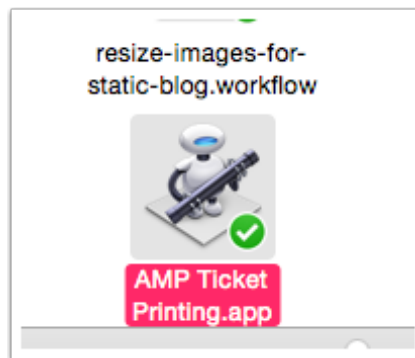

1. A single class of tickets is in the folder called 000-Tickets on the desktop, and they were downloaded in alphabetical order.

2. You have a folder called ELA-tickets on your desktop.

When those two steps are complete, double click the "Amp Ticket Printing" app. You can download it here: https://www.dropbox.com/sh/0ycnt4vrlxldvj/AADhF1ElZnY_C6ZuKk_kV6m6a?dl=0

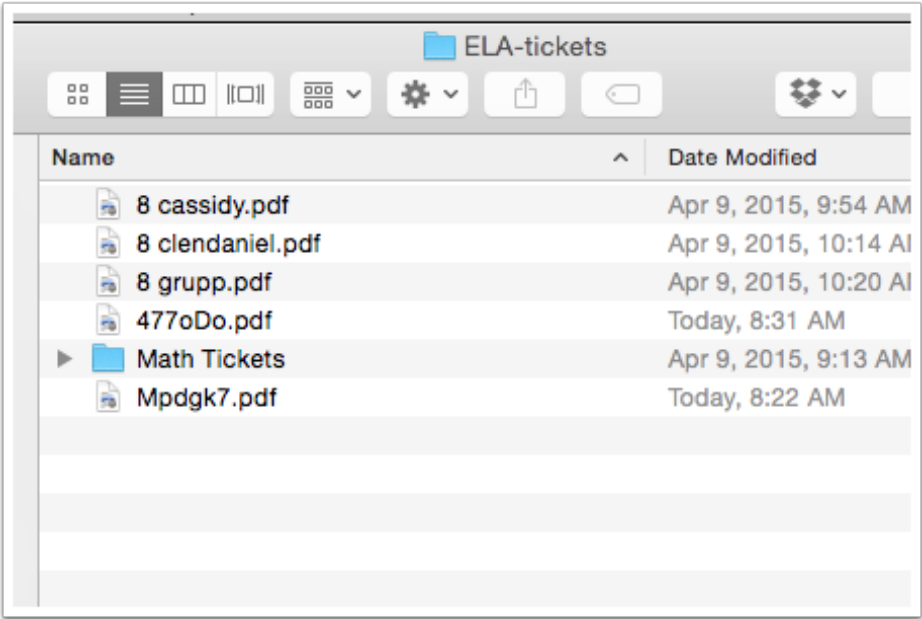

Nothing will happen that you will notice, probably, but it is working in the background. It only takes about 7 seconds to do it's work.

The result

Running the app sorts the files by the time they were created (which ensures they are in alphabetical order). Then it creates a PDF file with a name that is a random set of numbers and letters. You just need to rename the resulting PDF into a way that makes sense for you. For me, I renamed them to this naming sequence: "# name" where # is the grade level and name is the teacher's name, as seen below.

000 tickets

When you have verified that the combined PDF is correct, delete all the files you downloaded in 000 tickets so you can start again.
